L-FILIP has a function of controlling cell migration and cell death. L-FILIP has cytostatic, neuroprotective and immunosuppressive activities. The L-FILIP protein can be used for controlling cell migration and cell death, which is applicable in developing drugs for treating or suppressing cancer or tumour metastasis or as regulators of cell migration for transplantation therapy, and also for controlling, the mobility and cell death of nerve cells, promoting decomposition of the actin-binding protein e.g. filamin-interacting protein in the treatment of preiventrilcular nodular heterotopia

The present invention describes primer sets for synthesising 5602 full-
length cDNAs defined in the specification. Where a primer set comprises:

[a] an oligo-dr primer and an oligonucleotide comprisentary to the
complementary strand of a polynucleotide which comprises one of the 5602
nucleotide sequences defined in the specification, where the
oligonucleotide comprises at least 15 nucleotides; or (b) a combination
of an oligonucleotide comprising a sequence complementary to the
complementary strand of a polynucleotide which comprises a 5'-end
complementary strand of a polynucleotide which comprises a 5'-end
complementary strand of a polynucleotide which comprises a 5'-end
complementary strand of a polynucleotide which comprises a 1'-end sequence, where the
complementary strand of a polynucleotide complementary to a
coligonucleotide comprises a 1'-end sequence, where the
colification The primer sets can be used in antisense therapy and in
complementary full-length cDNAs. The primers are also useful for the
chetction and/or diagnosis of the abnormality of the proteins encoded by
the full-length cDNAs. The primers allow obtaining of the full-length
convas easily without any specialised methods AAH03166 to AAH13628 and
AAH13631 to AAH13632 represent human cDNA sequences; AAB92446 to AAB95893
crepresent human anino acid sequences; and AAH3632 represent
complementary sequences; and sequences; and sequences; and complementarion of the
                                                                                                                                                                                            88
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Primer sets for synthesizing polynucleotides, particularly the 5602 full length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs.
                                                                                                                                                                                          therapy;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Yamamoto J;

The present invention describes primer sets for synthesising 5602 full-
length CDNAs defined in the specification. Where a primer set comprises:

(a) an oligo-dr primer and an oligonucleotide comprises one of the 5602
complementary strand of a polymucleotide which comprises one of the 5602
nucleotide sequences defined in the specification, where the
complementary strand of a polymucleotide which comprises a 5'-end
complementary strand of a polymucleotide which comprises a 5'-end
sequence and an oligonucleotide comprising a sequence complementary to a
complementary strand of a polymucleotide which comprises a 5'-end
sequence and an oligonucleotide comprises a 1'-end sequence, where the
complementary strand of a polymucleotide and the combination of
complementary strand of a polymucleotide and the combination of
complementary strand of a polymucleotide which comprises a 1'-end sequence is selected from those defined in the
specification. The primer sets can be used in antisense therapy and in
gene therapy. The primers are useful for synthesising polymucleotides,
complementary full-length cDNAs. The primers are also useful for the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Primer sets for synthesizing polynucleotides, particularly the 5602 full length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          2438
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               2498
detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH03166 to AAH13628 and AAH3331 to AAH1872 represent human cDNA sequences, AAB92446 to AAB95893 represent human amino acid sequences; and AAH13629 to AAH13632 represent cliquouclectides, all of which are used in the exemplification of the present invention
                                                                                                                                                                                                120
                                                                                                                                                                                                                                       180
                                                                                                                                                                                                                                                                                                                    300

                                                                                                                                                                                                                                                                                                                                                                              9
                                                                                                                                            complements that are differentially expressed in respiratory disorder. The combination is useful for preparing a composition for diagnosing or treating respiratory disorders e.g. lung cancer, chronic obstructive pulmonary disease, emphysema or acthma. The present sequence represents human cDNA differentially expressed during lung cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      TGATCAGCTGGAACAGAAATTTAGAACTGAGCAGGATAAGGCTAACTTCCTCTCTCAACA

The present full-length cDNA sequence encodes GIP130b, a novel 130 kDa Goodpagture antigen binding protein (GPBP) interacting protein. The CDNA was isolated from a skeletal muscle cDNA library. The DOC/GIP90/130 mRNA family results from a complex diversification mechanism operating on the expression of the GIP90 gene on chromosome 3 (3q12). GIP90/130 on the polypeptides of the invention interact with GPBP and are capable of aggregation. They can be used to modify GPBP-GIP90/130 interactions, to modify GP90/130 aggregation, and to modulate gene expression. The invention provides GIP90/130 polypeptides, portions of them, antibodies, nucleic acid sequences, expression vectors and host cells, as well as methods for detecting GIP90/130 polypeptides and nucleic acids, and methods for treating an autoimmune disease or cancer by modifying the expression or activity of one or more GIP90/130 polypeptides New Goodpasture antigen binding protein-interacting 90 and 130 kDa polypeptides, useful for diagnosing and/or treating disorders associated with the GIP90/130 polypeptide, such as autoimmune disorders and/or Page 73-78; 115pp; English 48; Claim

The CDNA was isolated from a skeletal muscle cDNA library. The DOC/GIP90/130 mRNA family results from a complex diversification mechanism operating on the expression of the GIP90 gene on chromosome 3 (3q12). GIP90/130 on the polypeptides of the invention interact with GPBP and are capable of aggregation. They can be used to modify GPBP-GIP90/130 interactions, to modify GP90/130 aggregation, and to modulate gene expression. The invention provides GIP90/130 polypeptides, portions of them, antibodies, nucleic acid sequences, expression vectors and host cells, as well as methods for detecting GIP90/130 polypeptides and nucleic acids, and methods for treating an autoimmune disease or cancer by modifying the expression or activity of one or more GIP90/130 polypeptides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New Goodpasture antigen binding protein-interacting 90 and 130 kDa polypeptides, useful for diagnosing and/or treating disorders associated with the GIP90/130 polypeptide, such as autoimmune disorders and/or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Goodpasture antigen binding protein interacting protein; GPBP; GIP130c; human; transcription factor; autoimmune disease; cancer; immunosuppressive; cytostatic; chromosome 3q12; gene; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present full-length cDNA sequence encodes GIP130a, a novel 130 kDa Goodpasture antigen binding protein. (GPBP) interacting protein. The CDNA was isolated from a skeletal muscle CDNA library. It represents an mRNA species that results from faithful transcription and translation of GIP90 genomic DNA. GIP90/130 polypeptides interact with GPBP and are capable of agrecation. They can be used to modify GPBP-GIP90/130 interactions, to modify GP90/130 aggregation, and to modify GPBP-GIP90/130 interactions, to mivelence provides GIP90/130 polypeptides, portions of them, antibodies, nucleic acid sequences, expression vectors and host cells, as well as methods for detecting GIP90/130 polypeptides and nucleic acids, and methods for detecting an autoimmune disease or cancer by modifying the expression or activity of one or more GIP90/130 polypeptides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New Goodpasture antigen binding protein-interacting 90 and 130 kDa polypeptides, useful for diagnosing and/or treating disorders associated with the GIP90/130 polypeptide, such as autoimmune disorders and/or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     406 AGGCACACTATGGATCTGCAGAACCTGAGAAAGTGCTTCGGGTCCTGCACCGAGATGCCA

The present full-length cDNA sequence encodes GIP90, a novel 90 kDa

Goodpasture antigen binding protein (GPBP) interacting protein. The cDNA

Goodpasture antigen binding protein (GPBP) interacting protein. The cDNA

was isolated following a yeast two-hybrid screen for GPBP interactive

proteins and use of a partial clone to screen a human skeletal muscle

CC proteins and use of a postial close to chromosome 3 (3412).

CC mach library. The GIP90 gene was localised to chromosome 3 (3412).

CC madenine at position 2720 in the cDNA that was not present in GIP90

CC mocded a 130 kDa protein (GIPJ03a) and resulted (see ACC8322B) that

CC encoded a 130 kDa protein (GIPJ03a) and resulted from faithful

CC mocded a 130 kDa protein (GIPJ03a) and resulted sequence (i.e. no

A2720. GIP90/130 polypeptides interact with GPBP and are capable of

A2720. GIP90/130 polypeptides interact with GPBP and are capable of

CC aggregation. They can be used to modify GPBP-GIP90/130 interactions, to

modify GP90/130 aggregation, and to modify GPBP-GIP90/130 polypeptides, portions of them, antibodies,

concleic acid sequences, expression vectors and host cells, as well as

CC methods for treating an autoimmune disease or cancer by modifying the

CC expression or activity of one or more GIP90/130 polypeptides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1023 AATACATGGAGAAGAGTGATGAATTCATATGCCTACTAGAACAGGAATGTGAAAGATAA 1082

The invention relates to an isolated polypeptide associated with cell growth, differentiation and death (GGDD). Also disclosed are the polymolecutides encoding the polypeptides. The polympeptides and polymolecutides according the polymolecutides and polymolecutides are useful in diagnosing, treating and preventing concert, atherosclerosis), neurological (e.g. epilepsy, Huntington's disease, stroke), immune/inflammatory (e.g. apilepsy, Huntington's disease, stroke), immune/inflammatory (e.g. apilepsy, Huntington's concert, atherosclerosis), neurological (e.g. epilepsy, Huntington's disease, stroke), immune/inflammatory (e.g. apilepsy, Huntington's concert, atherosclerosis), neurological (e.g. epilepsy, Huntington's disease, stroke), immune/inflammatory (e.g. placyies) and concert inflammatory (e.g. placyies) and concert inflammatory (e.g. placyies) and concert in attenting the expression of fragments are useful in screening compounds for effectiveness as an agonist or antagonist of the polypeptide, Microarrays consisting protein-protein interactions, drug-target interactions, and gene protein-protein interactions, drug-target interactions, and gene concerts and profiles. Sequences alven in monitoring or measuring protein-protein profiles. Sequences alven in records ACC90578-ACC90634 represent polynucleotides encoding CGDD proteins of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1150

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention describes primer sets for synthesising 5602 full-
length cDMAs defined in the specification. Where a primer set comprises:

(a) an oligo-dr primer and an oligonucleotide complementary to the complementary strand or a polymucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the functional comprises at least 15 mucleotides, or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polymucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence, where the polymucleotide comprises a 1'-end sequence; where the coligonucleotide comprises a 1'-end sequence; where the coligonucleotide comprises a 1'-end sequence; where the coligonucleotide comprises at least 15 nucleotides and the compination of the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primers are least 15 nucleotides and the compination of particularly full-length cDNAs. The primers are also useful for the selection and/or dagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers are also useful for the clear companion of the full-length cDNAs. The primers are also useful for AAH13628 and AAH13632 to AAH13634 to PAB95893 represent human amino acid sequences; and AAH13639 to AAH13632 represent contraction of the collaboration of the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    GAAAGCAAGAAGCTTTTAAAACTCAAATCTGAAATGGAGGAAAAGGAGTACAGTCTGACA 1778
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Primer sets for synthesizing polynucleotides, particularly the 5602 full-
length cDNAs defined in the specification, and for the detection and/or
diagnosis of the abnormality of the proteins encoded by the full-length

                                                                                                                                                                                                                                                                                                                                                                      셤
                                                                                                                                                                                                                                                                                                                                                                                                          ò
                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to human nucleic acids (AAIS7798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunouppressant and cytostatic activity. The polymuclectides are useful in gene therapy. A composition containing a polypeptide or polymucleotide of the invention may be used to treat diseases of the peripheral nervous sinjuries, peripheral nervous injuries, call diseases, such as localised neuropathies and central nervous system disease, amyotrophic localised neuropathies and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as Immune system suppression, activity, chemotexcic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and c.N.S disorders. Note: The sequence data for this patent did not form

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                             Sequence 6
